

### Inline Flowmeter for compressed air and gases DN15 (1/2") - DN80 (3")

The inline flow meter HLX771/772, based on the measurement principle of thermal mass flow, is ideally suited for the measurement of flow in pipelines DN15 (1/2") up to DN80 (3"). Measurement of for instance the usage of compressed air, nitrogen, CO<sub>2</sub>, oxygen, helium or other non-corrosive, non-flammable gasses.

The unique mounting concept with a mounting valve permits rapid installation and removal of the device for periodical calibration. It simultaneously ensures high measurement accuracy through exact and reproducible positioning in the pipe.

The core design of the flow meter is based on the hot film sensor element, which is produced using the most modern thin film technology. This flow sensor features excellent long-term stability, a fast response time and an extremely high degree of reliability.

The flowmeters are setting new standards in terms of measurement accuracy and reproducibility thanks to their application-specific adjustment during production. As such, the HLX771 HLX772 is adjusted under a pressure of 7 bar. Adjusting the device specifically for its application has the advantage of ensuring that the emerging flow speed corresponds to the actual speed in the application. Contrary to conventional adjustment under normal pressure, sensor-dependent form factors when adjusting under pressure are compensated. The highest measurement accuracy and excellent reproducibility of the measurement values are the results of this innovative adjustment process.

Two outputs are available, for further processing of the measurement data. Depending on the application, these outputs can be configured as analogue (current or voltage), switch output or as pulse output for the measurement of the consumption.

#### Configuration software

The flowmeter can be configured conveniently, to meet the requirements of the application with the standard configuration software and the integrated USB interface.

Functionality of the software:

- Configuration of the output (scale / set point)
- 2-point user calibration for flow and temperature
- Readout of the counter values
- Reset of min / max values and counter
- Indication of the measurement value

Attribute	HLX771	HLX772
Sensor exchange under pressure with short flow interruption	4	
Sensor exchange under pressure without flow interruption		4
pipeline DN15...DN50 (1/2"...2")	4	
pipeline DN40...DN80 (1 1/2"...3")		4
Additional assembly of dew point- and pressure sensors		4
max. working pressure 16 bar 232 PSI	4	4
max. working pressure 40 bar 580 PSI		4

#### Typical Applications

- Measurement of consumption of compressed air
- Compressed air counter
- Mass flow measurement of industrial gases

#### Features

- high accuracy  $\pm 2.5\%$  of reading
- exceptional reproducibility
- quick sensor exchange at line pressure
- broad working range of 1 : 400
- very service friendly

## HLX771 - Assembly with ball valve

The ball valve assembly allows for the exact alignment of the sensing head within seconds during instalment and removal, with only interrupting the process flow for a short moment.

The ball valve assembly is suitable for pressures up to 16 bar (232 PSI) and available for pipe diameters DN15 (1/2") to DN50 (2").

## HLX772 - Assembly with MultiController

The unique assembly concept with one mounting valve permits simple installation and removal of the sensors for regular calibration, and also ensures a high level of measurement accuracy via precise and reproducible positioning of the flow sensor in the pipeline.

The MultiController with hot tap valve is used in applications where flow interruption is not permissible. The flowmeter can be removed for calibration or maintenance with no flow interruption.

The MultiController assembly is suitable for applications up to 40 bar (PN40) and is available for line sizes of DN40 (1 1/2") to DN80 (3").

The additional option of integrating dewpoint or pressure sensors saves on installation costs. The MultiController mounting valve makes it easy to set up a comprehensive compressed air monitoring system.

## Construction

The flow meter consist of the transmitter and the mounting valve. The transmitter is modular and consist of the probe and the evaluation electronics. The measurement probe contains the sensor element and the measurement electronics, in which the data of the factory calibration is stored. The enclosure with the signal conditioning is mounted either on the measurement probe (compact) or is remote with a sensor cable up to 10 meter (33 feet).

## Measurement of consumption (totalizer)

The HLX771/772 holds an integrated counter for the usage. The amount is indicated in the display and stored; the data will not be lost due to a power outage. The availability of the consumption amount as a free configurable pulse output is another helpful feature.

Material

housing metal (AlSi3Cu)

probe stainless steel

sensor head plastic (PBT)

ball valve brass

MultiController Aluminium

Housing protection class

IP65 / Nema 4

1) The accuracy statement includes the uncertainty of the factory calibration with an enhancement factor  $k=2$  (2-times standard deviation). The accuracy was calculated in accordance with EA-4/02 and with regard to GUM (Guide to the Expression of Uncertainty in Measurement).

2) The flow meter is calibrated at 7 bar (abs) 101.5 Psi. If the working pressure is different from 7 bar (101.5 Psi) you can compensate the error by setting the actual pressure with the configuration software.

## Flow measuring range in dependence on operating pressure

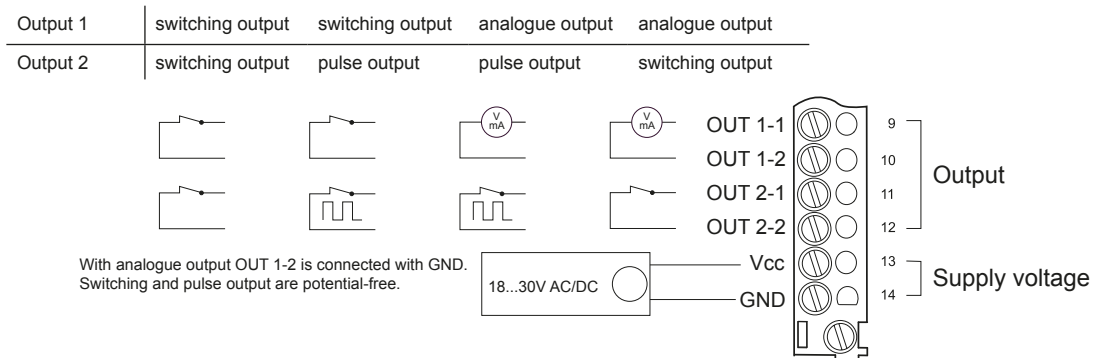

### Formula for calculating the standardized volumetric flow:

$$\dot{V}_0 = v_0 \cdot id^2 \cdot \pi/4 \cdot 3600$$

- $\dot{V}_0$  ... standardized volumetric flow [m³/h]
- $v_0$  ... standardized flow [m/s]
- $id$  ... inner pipe diameter [m]
- $\pi$  ... 3,1415
